

## Bulkhead Tables:

Supporting legacy products is often difficult for our airline customers. Airline Services Interiors can assist with the design and manufacture of replacement parts, and we also add value by actively seeking ways to improve on the original product where possible.

British Airways were unable to support a legacy Strativer bulkhead mounted meal table for Row 1 which was introduced on the former Bmi A320 fleet in the 2000s.

To address the problem, Airline Services developed an alternative bulkhead table assembly for British Airways, certified under our EASA Part 21J European Parts Approval and manufactured in-house using our extensive Part 21G Production capability. A number of enhancements have been introduced by Airline Services to make the tables more robust and to improve safety.

### Process:

- Complete end-to-end process for the design and manufacture of the replacement part
- Re-designed and re-engineered with improvements to the original OEM part
- Creation of a rapid prototype utilising laser scanning and 3D printing, or design of new component by our team of experienced engineers
- In house manufacture of non-structural plastic and metal components
- Testing and certification services to meet regulatory standards and provision of EASA Service Bulletin to allow the installation of the parts on your fleet.

### Benefits:

- Management of obsolete parts
- Product improvements to add value
- Integrated approach from design to manufacture
- Dedicated development/design support
